

- **Doesn't faster than light speeds violate causality?**

No, as in this theory there exists no such thing as relativity of time. Thus everything everywhere is always at the same time, and if it takes you to move, no matter at which speed, time will increase everywhere just the same. So the whole 'problem' with causality-violation for physical effects that are faster than the speed of light doesn't exist.

- **Did god create the universe?**

We don't know. This is not part of this theory as it only applies to our universe and not whatever you believe to exist around or before.

- **Does GPS work without relativity?**

This is a very often repeated, but wrong argument. The only thing why GPS is thought to not work without relativity is that 'clocks' run at a higher frequency in lower gravity. However this only shows that the frequency of quartz crystals depends on gravity and by no means that time itself is different. So yes, of course GPS works just the same without relativity, the formulas don't even change and the clock crystals frequencies have to be measured and synchronised just the same way as before.

## **So everyone is stupid except us?**

Lots of people are asking us how it might even be possible that millions of other scientists are wrong, and only we present ourselves as geniuses that claim to know everything better.

Please take it, we by no means think we are more clever or even genius. That's simply not true. Yet we are true nit-pickers when it comes to science, and we invested lots of time (decades!) and brain-power into trying to really understand the physics of our world. On our path across relativity we eagerly investigated several key-experiments that finally led to the conclusion for scientists to 'believe' in said theory from Albert Einstein.

But to us it looks like the whole theory of relativity from Albert Einstein was already based on false assumptions right from the beginning, dating back to Heinrich Rudolf Hertz and Maxwell in the 19th century. They 'proved' the speed of light as velocity for electromagnetic waves, but also formulated the same speed of light as maximal velocity as well as interpolating their findings to non-energy-transmitting electric and magnetic static fields, which according to this new theory are non-existent but only (always immediate) areas for force-interaction between charged particles.

What Albert Einstein did, was a really genius act, formulating the theory of relativity, which works astonishingly well even based on these false assumptions.

If you correct these mistakes, and look through all the thousands of experiments conducted since then, and which seemed to prove the theory of relativity, each single one can (more or less easily) be explained with this new theory. Here on this site we present the most influential experiments and prove that those are by no means only explainable with the theory of relativity as formerly believed. But this is a great deal of work, and we don't have the time to do this all on our own. So please, if you know any experiment that you think is not explainable without relativity, provide us all the details available and we are eager to find the facts and the (in our opinion) true explanation!

In the end this is just a theory, and thus cannot be proved right, just as the theory of relativity, yet we think lots of (until now) unexplainable observations will easily be explained (and also predicted!) by this new theory!

Have the courage to enter a new scientific era!

## **Disclaimer**

Attention: Everything written on this website is "WorkInProgress".

This means, that you will encounter incomplete sections, erroneous details, maybe even false claims or wrong interpretations.

Anyway we are convinced that the overall concept and ideas of this new theory describe the world better and more accurate than any other theory that we know of. This results in way too many consequences, meaning that there are thousands of experiments that should be revisited, that lots of new experiments should be implemented and lots of new and old mathematical formulas need to be corrected to complete this new theory of our universe.. which we (Ottmar & Jan) simply can't do on our own. That's why we decided to publish our findings in this early stage (we are thinking for ~ 15 years about this until now).

We encourage everyone to give us feedback via email, please send your comments to: *theory @ kechel.de* or simply use our contact form.

Please don't expect us to answer your mails, but be sure that we'll incorporate any correct feedback (no matter if it supports or refutes this theory!) into this website.
